Flagpole lighting guide

Photo ShutterstockI've been sore waiting for the winter solstice this weekend, because this is the shortest day of the year – and so every day after that it's going to be a little longer – I have some bad news: while the total length of the day will be longer, the sunrise will actually be getting later for a while, which means we'll have even darker mornings. The early risers may already be familiar with this phenomenon, but I was surprised last year when I woke up early to go for a run. The sunset is always sooner or later than any day, but also the sunrise. Sunrise was 7.39am at my location on the solstic, and it was late January before I ever saw the sunrise at 7:38 a.m. All of this depends on your location, so if you serb for some morning sun, go ahead and watch the sunrise and sunset times here. Let's take a look at New York. Its ariest sunset (darkest evening) was around 6 December, so the evenings are already a little sunnier. The sun will rise at 7:16 a.m.m 16:16 p.m., and it will start at 4:31 p..m. Then the sunrise continues later, in early January at 7:20 p.m. New Yorkers will see sunrise at 7:15 a.m. to January 20. Then they can start celebrating light mornings, looking forward to this 7.m. sunrise in early February and finally at 5:24 a.m sunrise in mid-June. G/O Media can get commissions. In San Diego, with the most beautiful sunset (darkest evening) it happened far back around Thanksgiving. The sunsets are becoming later and so are the sunrise. At the solstic, people in San Diego will see .m at 4:45 p.m sunset. They won't see the sunrise until January 30. Although if you're in San Diego, you've already got a good half-hour more morning sun than New Yorkers - so I hope you've taken advantage. Enjoy your morning run! Photo: flickr.comAua people on the New England coast have a long tradition of flying the flag from Memorial Day to Labor Day. We always flew with paint on cape cod, and when I built a house nearby, I had trouble finding a bottle that wasn't aluminium or plastic. I found an ambulance made from a 30-m long snore, which was taken from an old property in Wianno, County Barnstable, MA. Every seven years he needs a good serve and some coat paint. With today's modern boat finish, it makes sense to spend extra money on high-quality sea coating, which will keep its shine and last for years. While I will definitely be embarking on some projects around the house this weekend, I intend to spend the better part of my holiday relaxing, barbecue and spending time with family and friends. I hope you're going to do the right one. Happy FourthP.S. If you've been driven to undertake some projects this weekend, consider:Care and repair of outdoor furniture Creating your ideal outdoor room Smart new choices for outdoor lighting This site is not in your country in order to ensure that our content is always updated with current information, best practices and expert advice, articles are regularly reviewed by industry experts with years of experience. Flagpo are fairly easy to install, but there are some things you should avoid in order to enjoy a smooth and successful project.1. The wrong location Of the worst mistakes is locating your new flag pole, where you can come into contact with cars, lawnmowers, bicycles or other objects that might crash into them. Also, always avoid any overhead barriers, such as electric memes. Before digging, make sure that you do not damage the buried lines or pipes in the selected installation area. Avoid leaving your pole only on the floor when it is delivered. Lift the column as soon as possible. Until you do, leave it in protective wrap. Avoid leaving him flat. Place it up and keep it dry until you are ready to install it.3. Small Hole SizeNe dig holes for your flagpole installation too small. You should dig a hole four times the diameter of a pole. It should also be deep enough to flush the flag's half-floor sleeve with the surface. Do not use sand or dirt as a filler around the sleeve. Instead, use crushed rocks.4. Ready-mix CementAvoid with ready mixed cement. Use plain cement that dries naturally. Never put your sleeve on without being sure that the filled concrete is level. Avoid putting too much cement in the hole so that it does not overflow.5. The Slip-UpsLarge extension pole (such as the 40-foot pole) need an extension cord to insert it at the end and place it in the floor sleeve. Do not allow the extension to appear above ground. Don't force an extension into the ground. You may need to cut it out to fit.6. Removing the plastic wrapVoid temptation to remove the plastic cover around the flag fire. Keep it on for additional protection during the installation process.7. Zaxne flash collar Installation Do not set the pole in the floor hole before you slide the flash collar around the pole. You won't be able to place it on top and take it down, so save some aggravation by remembering to place it on the flag before placing the pole in the ground. Do not place the pole in the extension cord without using a few shimmers to ensure it is evenly stood. Use a wood shimmer that can hold up to the task. For example, cedar curl strips work well for this project.9. Wrong Drill Bit for Cleat HolesAvoid with the wrong size of a drill bit to make cleat holes. Use a 1/8-inch bite for a 15-metre pole, a 5/32-inch bite for 25-foot-half and 3/16-inch 3/16-inch for a 25-40-metre pole.10. Windy WeatherAvoid installing your flag in windy conditions. This kind of weather can make your mission difficult. Successful Living from Diesel, a collection of furniture and lighting by global brand Jenim, offers a unique fusion of retro and industrial design. Their latest Pett lamp is an kot beauty, coming in hot pink, fluorescent blue and basic white or black. The name of a tall lamp with a foot and a half shall be attributed to both the material used for the diphastator (PET means polyethylene terephthalate) and its friendly, animal-like size and crochet. In addition to replacing 12- wat compact fluorescent bulbs every now and then, this Pett, produced by the Italian foscarini lighthouse, does not require additional care and storage. Pett Table Lamp, Successful Life from Diesel, \$342, diesel.foscarini.com. For more of what we love, click here. In front of a large sandy beach (unusual for a rocky coastal area) and behind hijacked more than 10 acres of pristine sea surfaces, a regular destination for eagles, herons and migratory birds. Helen and Ethan Bell have been jumping on the chance to buy unsightly property. Helen spent years searching magazines for ideas and resources, so she and Ethan had a clear idea of what they wanted- an informal beach hut that wouldn't be too big or moreating. In working with Seattle architect Robert Maloney and contractor Donald Heggenes, they designed a scheme for a small building - a main house, a guesthouse, a garage and a ula - around the courtyard. This accommodation allowed them to install only three bedrooms in the main house and provide space for a central garden to shelter from strong winds and salt water. We've decided to create a house that's not in any identifiable style, a beach house with a stick you might find in South Carolina, Maine or here in Washington, says Maloney. Everything was dedicated to simple, untied and easy to worry about because it's a second home. The interior layout on the first floor is easily out and the kitchen opens to the living and dining area. The high, vaulted ceilings of most rooms, and plenty of windows and French doors, invites sunlight and offers stunning views. The second floor consists of two bedrooms, a small library and a large balcony. Helen decided to paint almost all white, including the melts below (from fir, were finished with heavy paint intended for garage flooring, which it swears to be easily cleaned with momp-mopping). Color choice reinforces the sense of continuous movement and makes the house feel easy and informal. By renting touches from the traditional-style homes they love, the Bells incorporated a number of classic architectural elements into the house - detailed mold, wainscoting and a deep coffee ceiling in the kitchen. White, however, retains all these features so as not to look too formal. Outdoors, wide decks on two levels step down to the beach, and combined with the landscape, it seems that the house is nesting among the dunes. At one end of the deck, the outdoor space is divided by the family's exterior and dining room and overhang. Sheltered from the wind and voiced with a fireplace and picnic table, this space gives the family seats primarily to enjoy the sunset over Puget Sound, while the fire silences the evening cold. The courtyard, says landscape architect Lyle Grant, is a mix of formal structure and informal plantings. Helen wanted to cut the garden for flowers, as well as parcels for herbs and vegetables. Grant suggested a piece for Oliver and another that would include a pleasant melancholy of years, seasons, and winter and deciman bushes. For the organization of the space, he prepared a classic plan, which he prepared from these four plantings, separated by gravel paths. In general, the scheme is an easy arrangement of huts, plants and flowers that are tolerant to the beach. The dinghy and ornamental dwarfs are planted all over Europe for visual interest. The cutting garden is outlined in boxes, for definition, and filled with such flowers as daly lilias, dahlias, and sinks. Herbs in this Mediterranean environment are good, and the shade garden, added in a protected niche next to the house, adopts plants that are not usually found by the sea, including camellias, oak-leaf hydrations, and Stewartia trees. By next year, all plantings should be well established, with the thickness of the grass creating a nesting environment for the birds. And one day, when Oliver brings his children here, Douglas's little jail next to the house will be big enough to be home to a swinging eagle.
